

# SAMBA SHARE

---

- Samba is a free, open-source software that implements the SMB/CIFS protocol used by Windows for file and printer sharing.
- Samba is like creating a "shared folder" on your Linux PC that appears as a network drive on a Windows PC.

## STEPS

- 1 `sudo apt install samba`
- 2 `sudo mkdir /home/sp/sambashare/`
- 3 `sudo nano /etc/samba/smb.conf`
- 4 `cd /home/sp/sambashare/ vi a1.txt`
- 5 `sudo service smbd restart`
- 6 `sudo ufw allow samba`
- 7 `sudo smbpasswd -a sp`
- 8 `cd /home/sp/sambashare/`

```
C:\Users\Sys>net use P: \\192.168.199.128\sambashare /user:sp PRIYA1203
The command completed successfully.
```
